Paracetamol

From Wikipedia, the free encyclopedia
(Redirected from [Panadol](#))

Paracetamol, also known as **acetaminophen**,^[a] is a [medication](#) used to treat [fever](#) and mild to moderate [pain](#).^{[12][13]} Common brand names include Tylenol and Panadol.

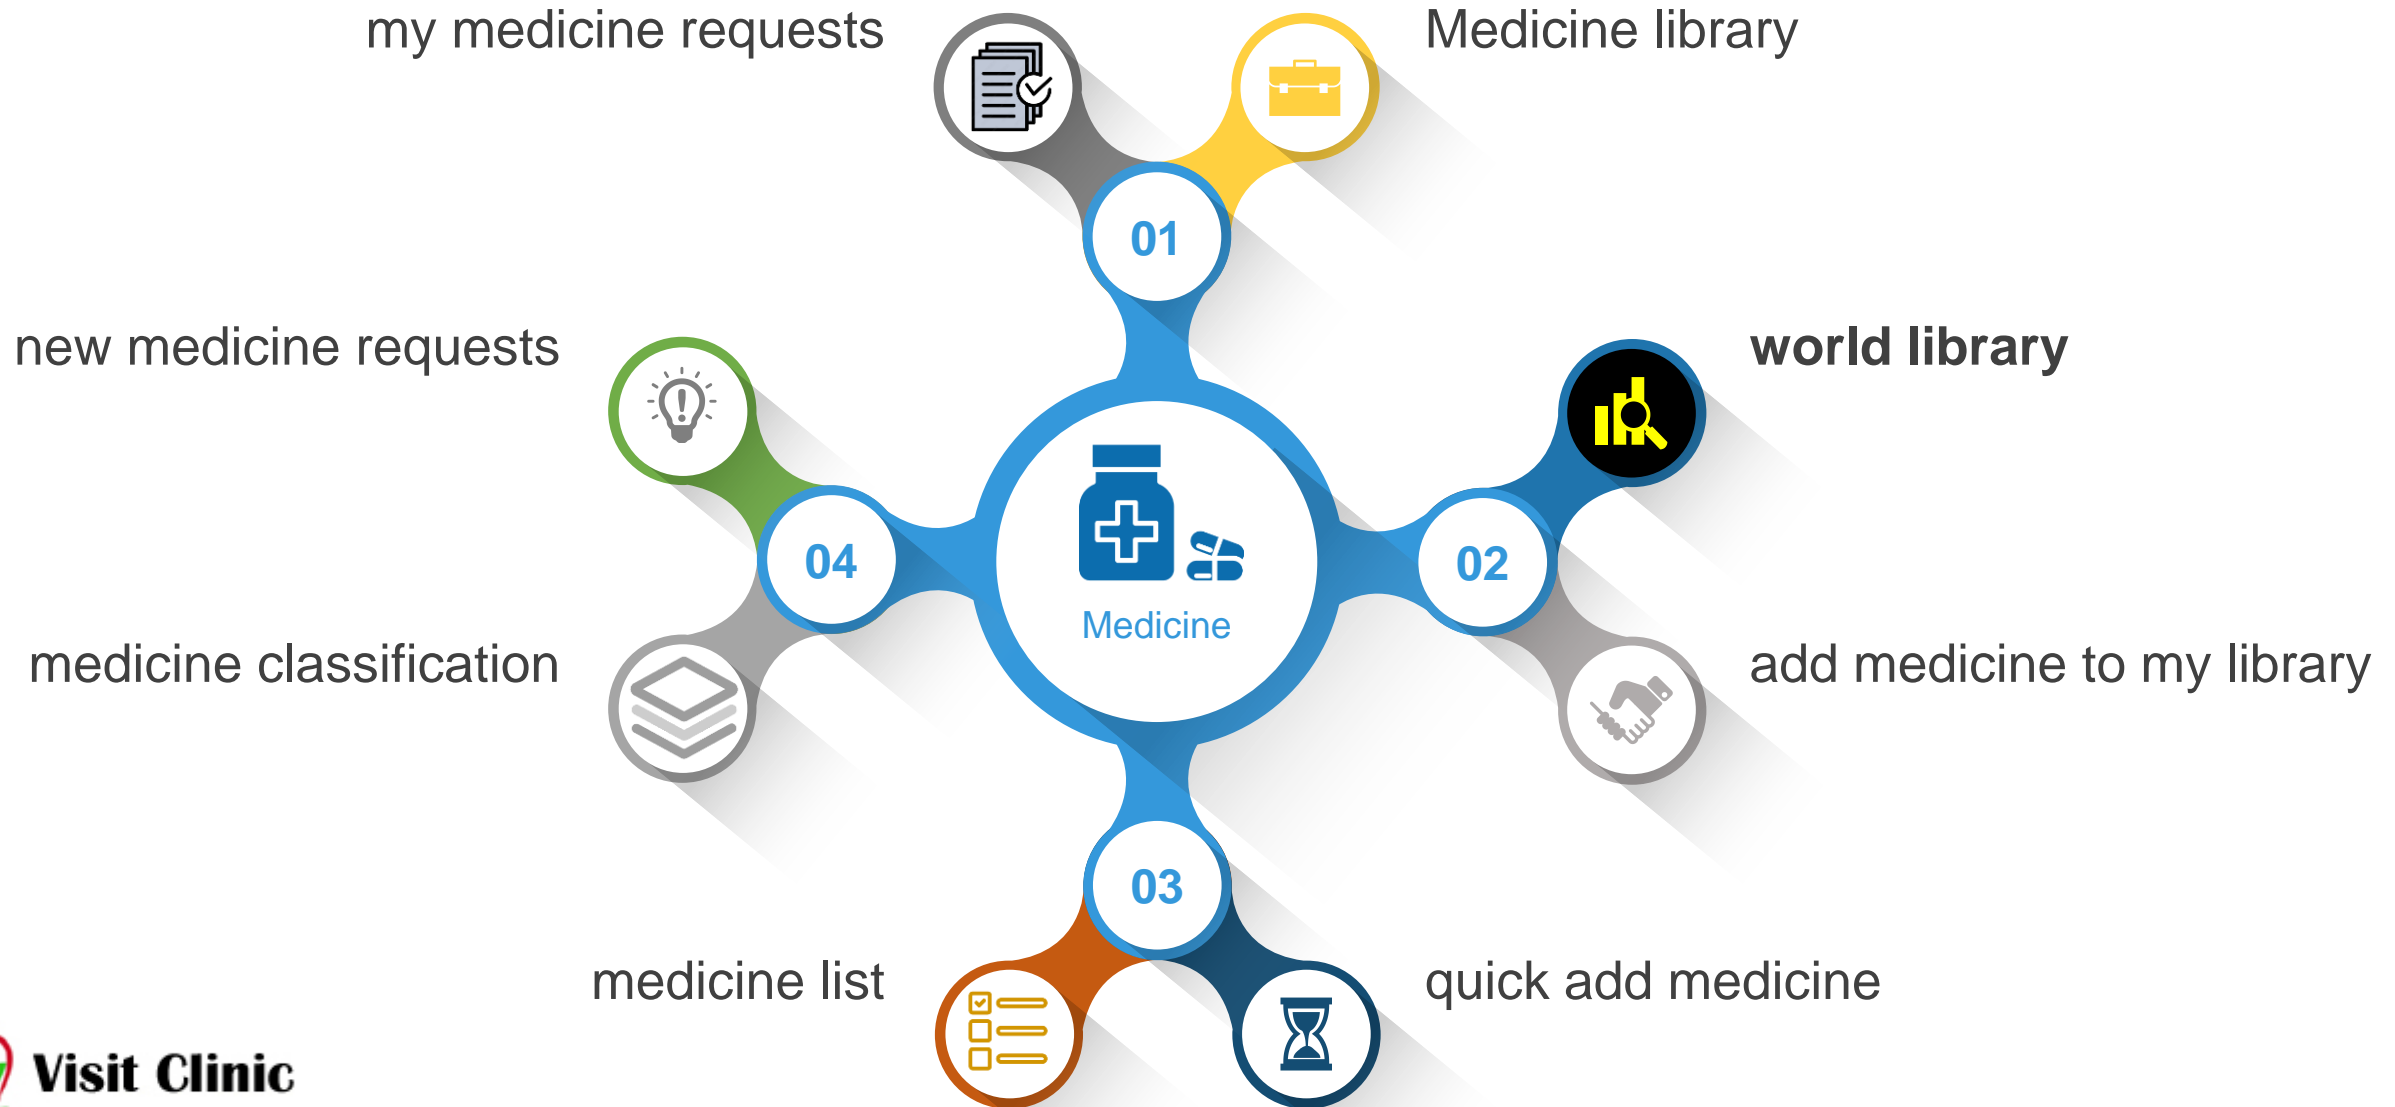

At a standard dose, paracetamol only slightly decreases body temperature;^{[12][14][15]} it is inferior to [ibuprofen](#) in that respect,^[16] and the benefits of its use for fever are unclear.^{[12][17][18]} Paracetamol may relieve pain in acute mild [migraine](#) but only slightly in episodic [tension headache](#).^{[19][20]} However, the [aspirin/paracetamol/caffeine](#) combination helps with both conditions where the pain is mild and is recommended as a [first-line treatment](#) for them.^{[21][22]} Paracetamol is effective for post-surgical pain, but it is inferior to ibuprofen.^[23] The paracetamol/ibuprofen combination provides further increase in potency and is superior to either [drug](#) alone.^{[23][24]} The pain relief paracetamol provides in [osteoarthritis](#) is small and clinically insignificant.^{[13][25][26]} The evidence in its favor for the use in low back pain, [cancer pain](#), and [neuropathic pain](#) is insufficient.^{[13][27][25][28][29][30]}

In the short term, common side effects of paracetamol are [nausea](#) and abdominal pain, and it seems to have tolerability similar to ibuprofen.^{[31][32]} Chronic consumption of paracetamol may result in a drop in [hemoglobin](#) level, indicating possible [gastrointestinal bleeding](#),^[33] and [abnormal liver function tests](#).^[34] There is a consistent association of increased [mortality](#) as well as [cardiovascular](#) ([stroke](#), [myocardial infarction](#)), [gastrointestinal](#) ([ulcers](#), [bleeding](#)) and [renal](#) adverse effects with taking higher dose of paracetamol.^{[33][32][35]} The drug may also increase the risk of developing [hypertension](#).^{[36][37]} Elevated frequency of [asthma](#) and developmental and reproductive disorders is observed in the offspring of women with prolonged use of paracetamol during [pregnancy](#), although whether paracetamol is the true cause of this increase is unclear.^[36] Some studies suggest that there is evidence for the association between paracetamol during pregnancy and [autism spectrum disorder](#) and [attention deficit hyperactivity disorder](#), while making clear further research is required to establish any causal link,^{[38][39]} which has prompted some calls to limit its use in pregnancy to the lowest effective dosage for the shortest possible time.^{[36][40][41]}

The recommended maximum daily dose for an adult is three to four grams.^{[42][43][25]} Higher doses may lead to toxicity, including [liver failure](#).^[44] [Paracetamol poisoning](#) is the foremost cause of [acute liver failure](#) in the [Western world](#), and accounts for most drug overdoses in the United States, the United Kingdom, Australia, and New Zealand.^{[45][46][47]}

Paracetamol was first made in 1877 or possibly 1852.^{[48][49][50]} It is the most commonly used medication for pain and fever in both the United States and Europe.^[51] It is on the [World Health Organization's List of Essential Medicines](#).^[52] Paracetamol is available as a [generic medication](#), with brand names including Tylenol and Panadol among others.^[53] In 2019, it was the 145th most commonly prescribed medication in the United States, with more than 4 million prescriptions.^{[54][55]}

The screenshot displays a Google Maps interface for the Great Sphinx of Giza. The search bar at the top left contains the text "Great Sphinx of Giza". Below the search bar is a thumbnail image of the Sphinx. The main map area shows an aerial view of the Giza pyramid complex with several location markers: "Valley Temple of Menkaure", "Pyramid of Menkaure" (with the subtitle "Circa 25th-century BCE pyramid at Giza"), "Templo funerario de Micerinos", and "Pyramids of Queens" (with the subtitle "Ancient temples at Giza necropolis"). The top navigation bar includes icons for Restaurants, Hotels, Attractions, Transit, Parking, Pharmacies, and ATMs. The left sidebar provides details for the Great Sphinx of Giza, including its name in Arabic, a 4.7-star rating from 14,969 reviews, and a description: "Iconic stone monument that is more than 4,500 years old & has a human face on a lion's body." Below this is an advertisement for Booking.com with the text "Ad · Booking.com - Hotels Nearby" and "Places to stay near Great Sphinx".
