## 1. Modern Systems

### 1.1 Introduction

Modern Systems is a specialized software establishment and the main purpose is to provide software development, software analysis software implementations based on international standards.

Modern Systems for software development developed a medical software to provide online services for doctors, pharmacy and medical sales agents, public users are a main part of the systems since they will use the system as ordinary user and doctors and pharmacy will use the system to search for them and provide the right medicine or service.

The system will offer wide range of functionalities like internal medicine or other medical specializations. The system also will provide a list of medicine available for everyone, the list consists over 600 thousand medicine common names organized by country.

Visit Clinic will offer general modules like account module with general ledger to add income or expenses for each clinic or pharmacy. There are other modules inside the system please register for more information.

Modern Systems offer software analysis services based on high standards for private and public organizations such as information technology infrastructure library or ITIL and its specialized for IT services and it known worldwide by many organizations. ITIL provide around twenty-six business process and professional certifications for beginner's level, intermediate level and expert level.

Modern Systems can offer business analysis for the process and help organizations to implement this process based on international systems and at the same time can also provide software development for given process such as incident management, and knowledge management.

Modern System founder achieved success story before with Microsoft, Horvath and Link dot net in a governmental organization.

CMMI or capability maturity model integrations is an international standard the main goal is to provide business process to help the organization to do their business in an organized style. There are around twenty-two business process.

Modern Systems founder believe I human resources development to help you people specially to provide software business process development and analysis to help the national economic in the IT field, and this helped him to write a complete book with USA consultant to write the CMMI book and provide this book for free to the humanity.

Portal's development or custom software is a special development for customer based on recommendations and direction, Modern Systems can provide custom software's based on customer needs and the software's can have accessed online or through the internal network.

Modern Systems believe in IT specialization diversity and will offer to satisfy customer needs by providing professional services or products based on international standards and with competitive prices.

## 1.2 Why Modern System?

Organization executives would like provide exceptional products and services to attract people from the globe and to set everyone needs and expectations, IT teams have curial responsibility to deliver good eservices quality to the organization and with agreed costs with the management and it better to find affordable solutions for the organizations.

Modern Systems is an Egyptian establishment formed to fulfill the software needs for everyone. Modern Systems developed strategic plans to provide the essential support to many private and public organizations with developed in house software with high quality and affordable prices or customize famous software's worldwide based on customer expectations and directions.

Modern Systems have good experience in business process and software implementations and employ selected technologies with each-others to meet the organization needs.

Modern Systems believe in human well epically for young people to achieve the developed strategic goals such as good life for everyone and this will reflect the provided services to the local and international markets.

Modern Systems will provide in house software like [www.VisitClinic.org](http://www.VisitClinic.org) or develop software's based on customer needs and expectations, or customize ready-made software to the customer based on his expectations like Microsoft SharePoint or any other provided software's.

Modern Systems can provide software development to many international standards such as ITIL (information Technology Infrastructure Library), CRM (Customer Relationship Management), CMMI (Capability Maturity Model International), or another international standard with customization and configurations.

The Modern Systems will provide all types of support to the customer by qualified consultants to analyze and develop software / configure software's to the customer based on his expectations and match the developed organization strategic plans.

## 2. Pharmacy Management System

### 2.1 Introduction

A pharmacy management system (PMS) is a software application that helps pharmacies automate their operations. The pharmacy management system, also known as the pharmacy information system, is a system that stores data and enables functionality that organizes and maintains the medication.

*“Pharmacy informatics is the scientist field that focuses on medication-related knowledge within the continuum of healthcare systems- including its acquisition, storage, analysis, use and dissemination- in the delivery of optimal medication-related patient care and health outcomes.” (Andy Tiv).*

Pharmacy management system developed by Modern Systems for Software Development for the middle-east countries to full fill the need for the pharmacies software and try to provide an excellent software service to the medical organizations.

Modern System for Software Development provide online services through [www.VisitClinic.org](http://www.VisitClinic.org) portal to all medical organization types.

Pharmacy management system offer a number of benefits to pharmacies, including:

- **Increased efficiency:** PMSs can help pharmacies to streamline their operations and save time. This can free up pharmacists to spend more time on patient care.
- **Improved accuracy:** PMSs can help to reduce errors in prescription processing. This can help to protect patients from harm.
- **Enhanced compliance:** PMSs can help pharmacies to comply with government regulations. This can help to protect the pharmacy from fines and penalties.
- **Increased customer satisfaction:** PMSs can help pharmacies to provide better customer service. This can lead to increased patient loyalty and repeat business.

“Healthcare delivery is inherently complex and knowledge dependent, and it is becoming ever more challenging for providers to absorb and assimilate the growing volume and granularity of knowledge needed for safe and effective patient care. The clinical knowledge available is often conflicting, misaligned, and not readily identified or available at the point of care.

To serve the needs of any clinical encounter, relevant patient centered knowledge must be accessible to the person supplying care at the right time in the workflow. Such knowledge can be delivered proactively (before decisions are made), interactively (as decisions are made), or asynchronously or passively as reference information that can be searched online.

Pharmacy informatics plays a key role in supporting and overseeing the core processes involving information and knowledge delivery throughout the clinical knowledge life cycle. This role includes knowledge discovery and creation, knowledge application and delivery, and knowledge asset management.” (Andy Tiv).

“Pharmacy informatics is responsible for leveraging knowledge at the right time and place within a provider’s workflow to improve care giver effectiveness, work satisfaction, patient satisfaction, and the quality of care. Pharmacy informatics must continue to evolve to optimize the use of clinical decision support and develop tools that reduce information over load and provider burden. Pharmacy informatics is responsible for looking beyond the traditional means of delivering knowledge by analyzing process and outcomes data from existing applications to develop and implement new solutions for embedding knowledge into the workflow.” (Andy Tiv).

## 2.2 Roles and Responsibility

Pharmacists who practice clinical informatics must collaborate with other healthcare and information technology professionals to promote the safe, efficient, effective, timely, and optimal use of medications. They contribute to the transformation of healthcare by analyzing, designing, implementing, maintaining, and evaluating information and communication systems that improve medication-related outcomes and strengthen the pharmacist-patient relationship. (Andy Tiv).

the role of pharmacy informaticists revolves around their knowledge of pharmacy practice, safe medication use, clinical decision-making, and the improvement of medication therapy outcomes, combined with their understanding of the discipline of informatics and medical systems. their primary roles and responsibilities must encompass five broadly defend categories. (Andy Tiv).

- **Data, information, and knowledge management:** managing medication-related information while promoting integration, interoperability, and information exchange.
- **Information and knowledge delivery:** delivering medication-related information and knowledge throughout the clinical knowledge life cycle, from the point of knowledge generation through cataloging, embedding knowledge into the workflow, and measuring the usage and effectiveness of that knowledge.
- **Practice analytics:** developing point-of-business analytic solutions for improving decision-making
- **Applied clinical informatics:** applying user experiences, research, and theoretical informatics principles to improve clinical practice and usability.
- **Leadership and management of change:** leading and participating in the procurement, development, implementation, customization, management, evaluation, and continuous improvement of clinical information systems.

(Andy Tiv).

### 2.3 Policy

Modern Systems for software development is specialized organization in information technology and the main objective is to develop software and deliver high quality software products and services to the clients. Modern Systems developed well-organized strategy to deliver high quality products and services, and provide excellent customer support through international standards.

Modern Systems for software development developed medical software for pharmacies the system accessed totally through pharmacy desktop PC. The pharmacy administrator able to add users to the system. The system will offer many offline services to the users.

Visit Clinic provide simple medical pharmaceutical services. Visit Clinic is a pharmaceutical management system with easy-to-use feature and affordable. The system enables collaborations between users.

Modern Systems for software development will not collect any type of information's form the pharmacy PC.

All medical products prices are not matching the latest countries updates, please update all prices in order to sell your products

All medical products need a barcode number, please add barcode in order to sell your medical products.

*All official communication through the provided contact us email to get answers to your question and to receive your **official license file** to activate your product license.*

Contact Us If you have any question, please send an email to the company customer service at [contactus@VisitClinic.org](mailto:contactus@VisitClinic.org)

## 2.4 System Components

The system provides nine modules to the pharmacy.

- **POS:** These forms will provide sell products and return products to the pharmacy
- **Library:** The required information's to operate the pharmacy. Library consist of (Products, Inventory, Customers, Medical Company, and Medical Sales Agent).
- **Orders:** Prepare a new order and send it to medical sales representative.
- **Finance:** chart of account, general ledger, and invoices are the main purpose to provide financial information's about the system.
- **Assets Management:** All pharmacy electronic and non-electronic devices.
- **Case Management:** customer case management to record and follow up for customers cases.
- **HR:** contract, salary and attendance forms.
- **Reports:** select the require report, preview the report and print it.
- **Administration:** configure the system.

Figure 1 System Components

## 2.5 Activation

The system is protected by the Egyptian laws and totally developed at Modern System for Software Development. The purchased users only have the right access to use the system. Product activation is available through Modern System for Software Development contact us email to make sure that you are purchased the system and you are eligible to use the system. First time installation you be requested to see this form and to copy and paste the displayed encrypted information's to [contactus@VisitClinic.org](mailto:contactus@VisitClinic.org)

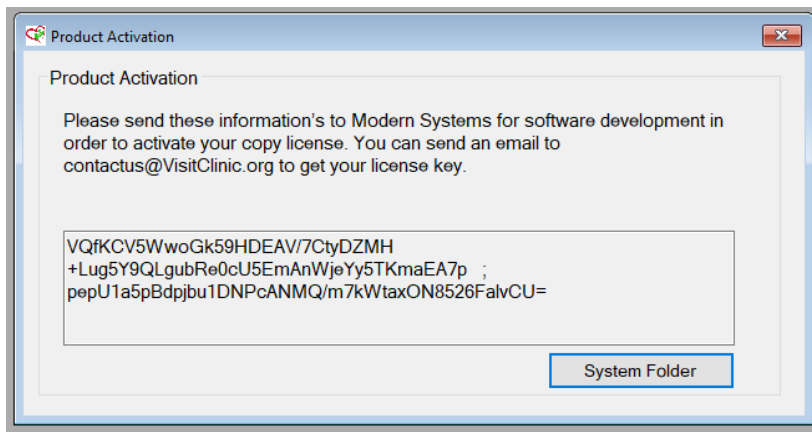

Figure 2 Product activation

Modern Systems for Software Development will send to you license file for your PC.

Please note that the file is for one PC only and can't be transferred to other PC.

Activation for can be opened from *Help >> Activate menu*.

The contact person from the company will send to you the right file "*License.Lic*", you need to copy and paste the sent file to your application folder "*Application folder is the System Folder located at Product Activation form*".

The activation form has a system folder button please click on this file in order to browse windows folder, you can paste the file to the folder. Restart the pharmacy system and the software will be activated.

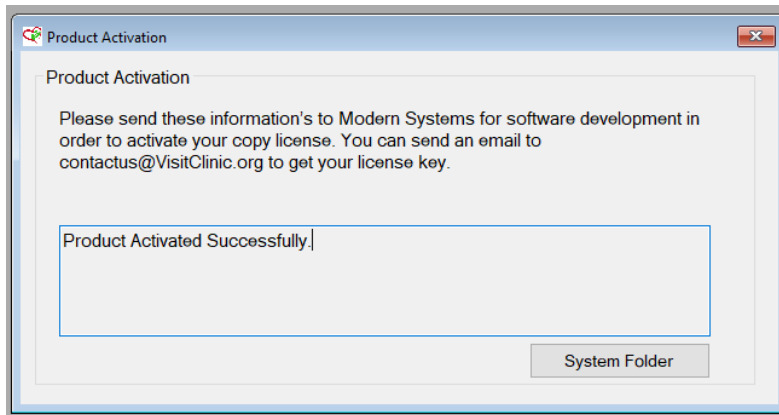

Figure 3 Product Activated Successfully.

Please if you have any challenges, please send an email to us at [contactus@VisitClinic.org](mailto:contactus@VisitClinic.org)

## 2.6 Login Screen

Pharmacy login screen is the first form you need to interact with to login to the system. The system provides a preconfigured user to login to the system which is

**Email:** *public*

**Password:** *public*

You need to change the user information's once you login to the system and activated the system.

Change the user information from *Administration Menu >> User Management Menu >>Users List*

Change password from *Administration Menu >> User Management Menu >>Change Password*

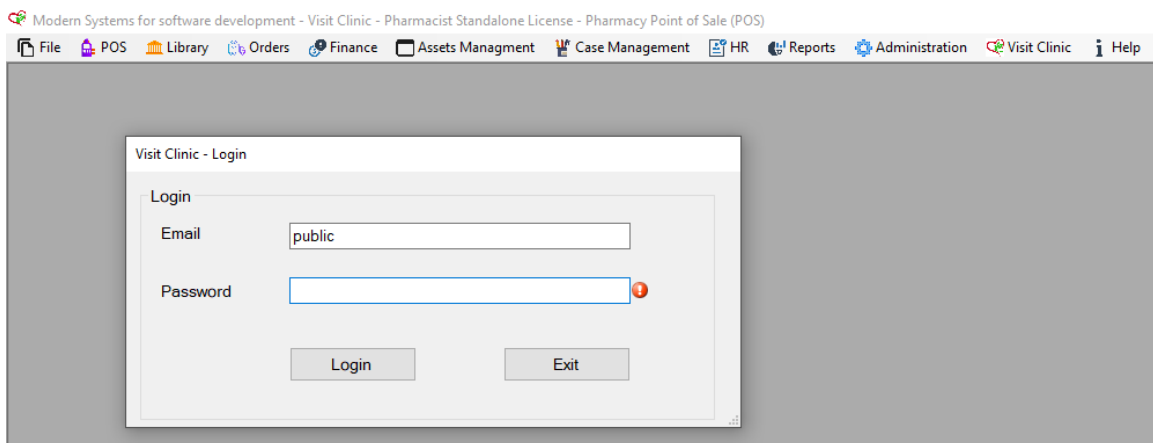

Figure 4 Login Screen

### 3. POS

#### 3.1 New POS

POS is a form will help pharmacist to sell medical products. This form considered important to the pharmacy because they will be going to use it in a daily basis. The form will provide the required information's to sell products. The form provided in English and Arabic Language.

POS Form Provide the following Functionality:

- **Pharmacy Name:** This will display pharmacy Name
- **Customer Mobile:** Type customer mobile to search for customer, you can clinic on New to add a new customer. Use Enter keyboard button to search and move the next text box area which is the product barcode.
- **Monthly Medicine:** is the required monthly medicine for customer with quantity.
- **Product barcode:** use this textbox to search for products by barcode.
- **Product Name:** is a read only text box area to display product name.
- **QTY:** is the required quantity from the customer
- **Price:** is the provided price for the product, you can change the product price and this will not affect on the pharmacy inventory or product price information. The main purpose to use this feature is to automatically set the product price because in some cases you need to sell a specific amount of the medicine.
- **Stock:** will display stock if you added previously product inventory. The system can sell medical products without stock and with stock.
- **Add Button:** will add the product to the Table / Grid Table.
- **Save Order:** this button will save the order into system database.
- **Print:** Print the POS receipt.
- **New Order:** Start a new POS.
- **? Button:** this button will help you to browse more than 13.000 medical product, you can select the product and start using it to the POS. please see the figure 3.
- **Order #:** The system will display the order number after saving the order.
- **Table / Grid Table:** this table contain the required product for the customer
  - o **Delete Row:** You can delete a complete row from the table.
  - o **QTY:** change the quantity this will affect on the total price.

- **Price:** change the price will affect on the total price.
- **Stock and barcode:** you can't change these information's.
- **Pharmaceutical Company:** is the producer for the product.
- **Number of Items:** This text label will display the required product.
- **Total Price:** is the receipt total amount of required money.

## 4. Library - Product

### 4.1 New Product

New Product is a form designed to help pharmacist to add a new medical product to the system in order to use later on the system.

Please carefully add product to the system because once you added a new product the system delete medical product is not exists but you have an opportunity to modify the product information's.

The system will provide the text label information's:

- **Product Name:** the officially provided product name from the manufacturing
- **Dosage:** This how the medical product will be used by the customer.
- **Manufacturing co:** the medical manufacturing company.
- **Price:** provide price to the customers.
- **Barcode:** graphical representation to the medical product.

The screenshot shows a software window titled "New Medical Product". Inside the window, there is a section titled "New Medical Product Information's". This section contains five text input fields, each with a red information icon to its right. The fields are labeled "Product Name", "Dosage", "Manufacturing co", "Price", and "Barcode". Below these fields are two buttons: "Add Product" and "New Product".

Figure 18 New Product

### 4.2 Barcode Product Search

pharmacist can search for medical product by barcode in order to fast find a single product. one you entered the product barcode you can click on the search button to find the product information's.

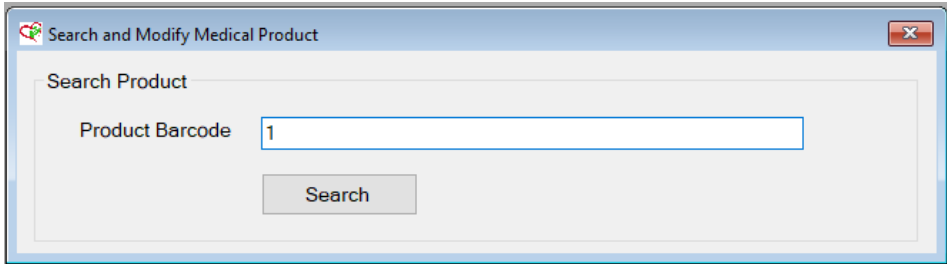

Figure 19 Barcode Product Search

The system will display the medical product information's, you can modify the medical product information's such as name, dosage, manducating company, price and barcode number.

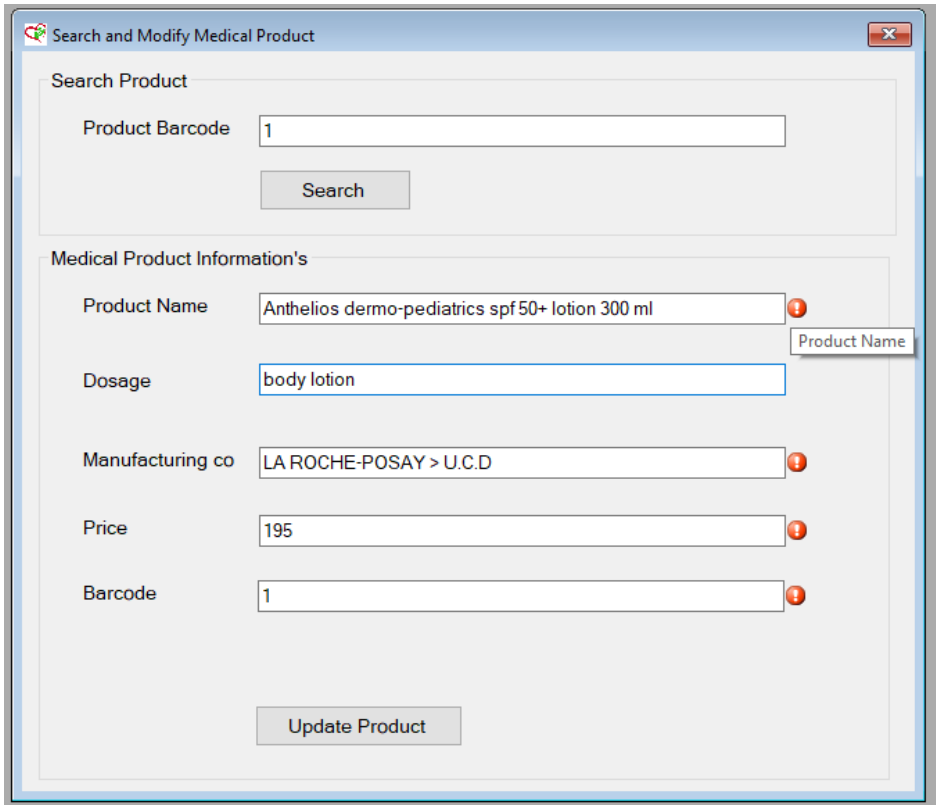

Figure 20 Barcode Product Information

### 4.3 Product Browse

The system will help pharmacist to browse amiable medical products from the system by Name and Bar Code. The system will give you an opportunity to search by typing % sign in order to fast preview product.

Please note that the system will display the first 30 records only, so please take care to enhance your product information.

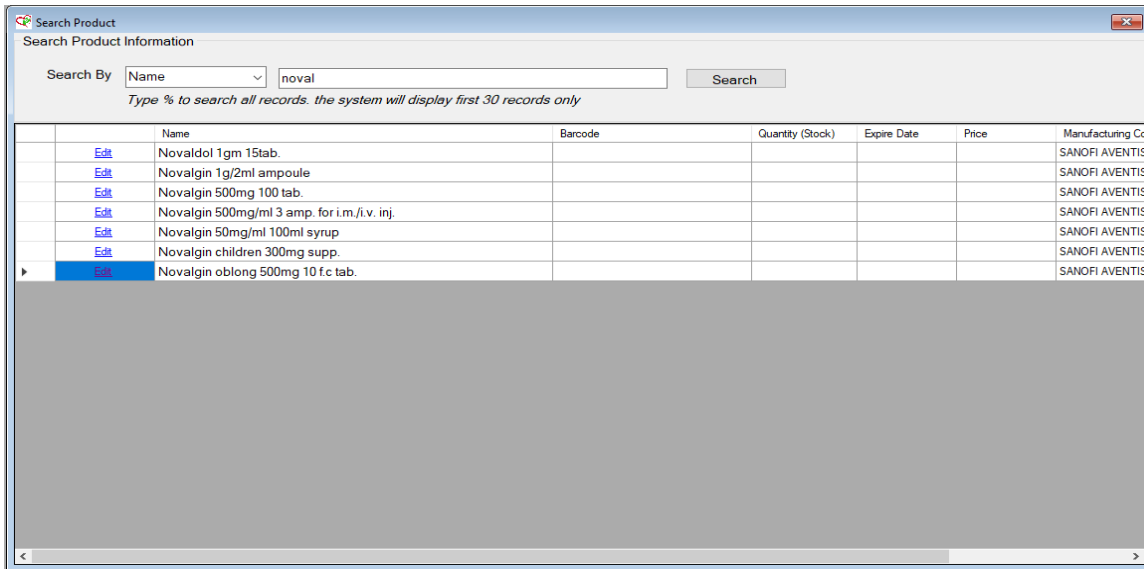

Figure 21 Product Browse

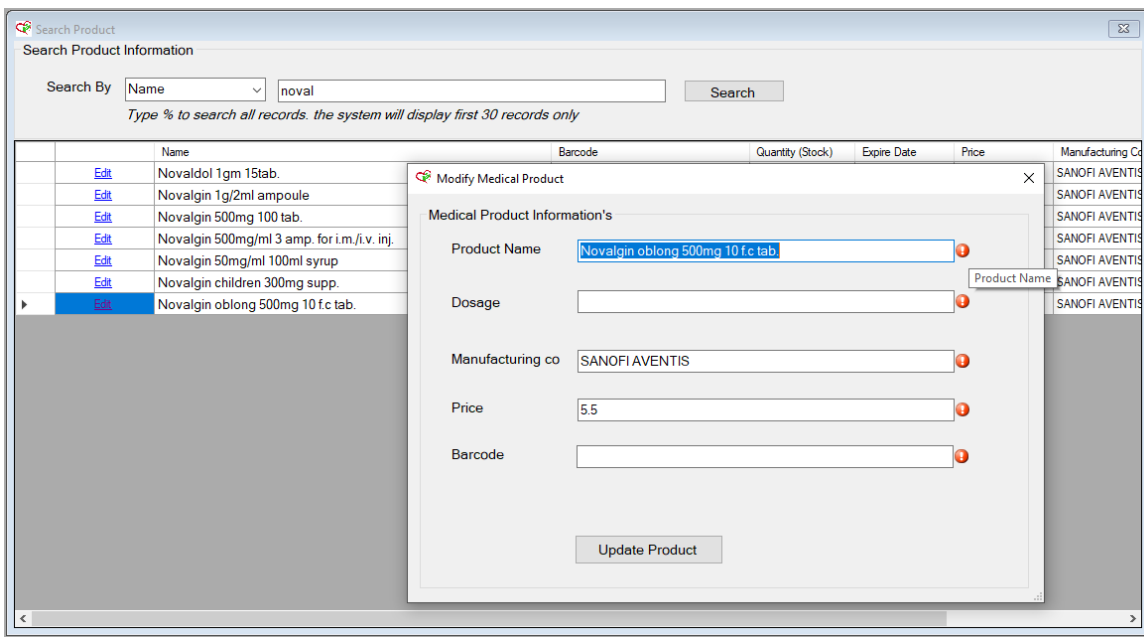

Figure 22 Product Browse modify product information's

## 5. Inventory

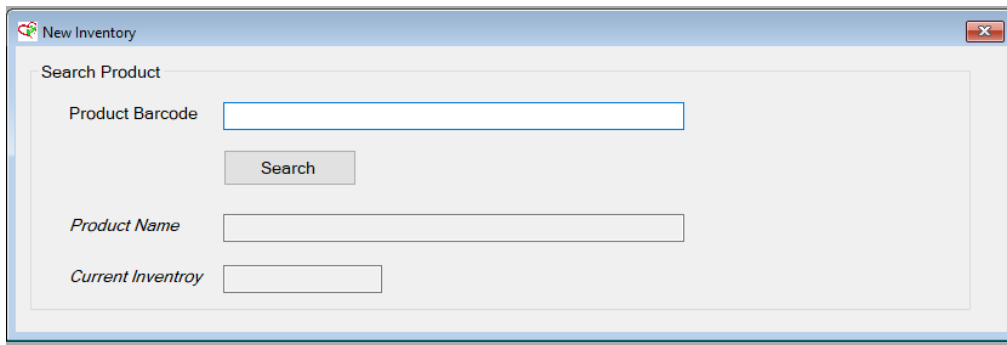

### 5.1 New Product Inventory

The System will provide more than 13.000 product and we mentioned before how to add a new product to the system. The pharmacist has the ability to add a new product inventory to the system.

Inventory will display at the POS form when pharmacist trying to sell a new medical product.

Please note that the system can sell products without stock.

The following form will help you to search for medical product.

The screenshot shows a window titled "New Inventory" with a search form. The form has three input fields: "Product Barcode", "Product Name", and "Current Inventory". A "Search" button is located below the "Product Barcode" field. The window has a standard Windows-style title bar with a close button.

Figure 23 New Product Inventory

The system will display the following information's:

- **Pharmacy Name:** This will display the pharmacy name
- **Unite Type:** unit types such as (BAG - Bag, BKT - Bucket, BND - Bundle, BOWL - Bowl, etc....)
- **Quantity:** The inventory quantity
- **Product Price:** product customer price
- **Total Price:** total products price
- **Sales Order Number:** medical company sales order number
- **Expire Date:** medical product expire date
- **Sales Order Date:** sales order purchase date
- **Medical Company:** select medical company name:
- **Sales Agent:** select sales agent working with the medical company

- **Add Inventory Button:** add new inventory
- **New Inventory Button:** add a new inventory and clear form data and start search for a new product by bar code.

Medical product information displayed below

The screenshot shows a 'New Inventory' window with the following data:

Field	Value
Product Barcode	1
Product Name	Anthelios dermo-pediatrics spf50+ lotion 300 ml
Current Inventory	10
Pharmacy	Modern Systems for Software Development
Unit Type	BAG - Bag
Quantity	11
Product Price	22
Total Price	33
Sales Order Number	44
Expire Date	Sunday, May 28, 2023
Sales Order Date	Sunday, May 28, 2023
Medical Co	ADWIA
Sales Agent	Mahmoud Abd Al Rahman

Figure 24 New Product Inventory Information's

### 5.2 Search and Modify Inventory Information's

Inventory management is part from the pharmacy system and it will help pharmacist to add inventory to the systems. The search and modify inventory information is a form designed to help pharmacist to search for current inventory and modify the provided information's.

Please note that the system will display Edit link button as long as there is an inventory to a specific medical product.

The system will provide the following search functionalizes:

- Product Name
- Barcode

The form will display the medical product information's

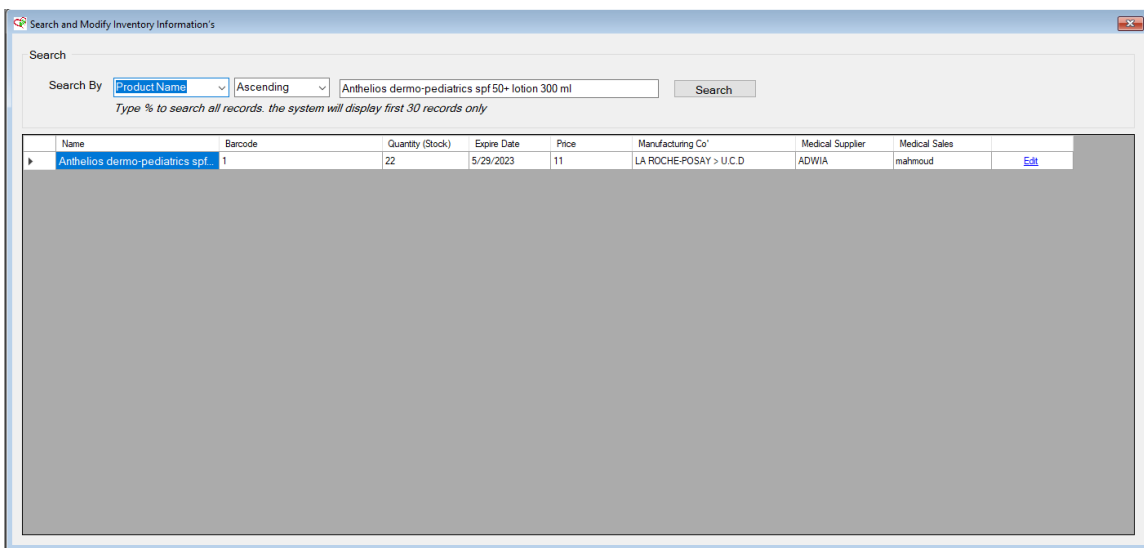

Figure 25 Search and Modify Inventory Information's

Edit link button will be available as long as there is an inventory for the medical product, you can click on Edit and view the product inventory information's.

Please note that after you modified the product inventory quantity value, this will affect on the product remaining amount of product availability.

You can manage the product remaining inventory from the "Browse Inventory" form
